ASPN-ALT-GO-F-08

Genomic map of the TUM5 gene region on chromosome 10p11.2. The map shows the TUM5 gene structure with exons as boxes and introns as lines. The gene is divided into two main regions: JPM (Juncus perianth margin) and ATP (Antennal Pore Tissue). The JPM region contains exons 53 to 25, and the ATP region contains exons 24 to 1. The TUM5 gene is located on the right side of the map, spanning exons 24 to 1. The map also shows the location of the TUM5 gene relative to the JPM and ATP regions.
